ELETTRO / ELETTRO OS / MULTICAM

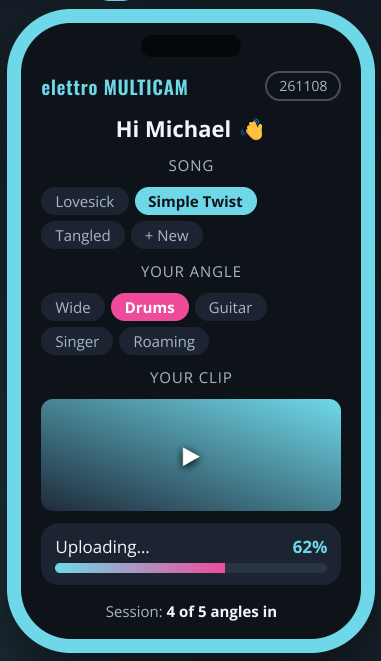

ELETTRO MULTICAM

EVERY PHONE IN THE ROOM. ONE MULTI-CAM VIDEO.

Everyone shoots with the phone in their pocket. Scan one QR code, upload your clip, and with one tap Elettro OS builds the edited multi-cam video, the shorts and the social posts — **no syncing, no gear, no editing.**

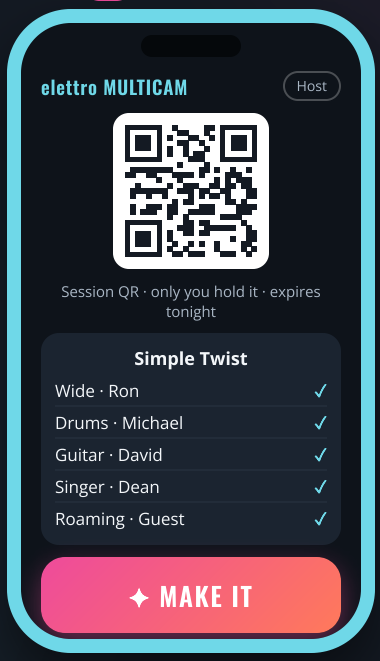

1 BAND PHONE

SCAN & UPLOAD

Scan the session QR, pick the song and your angle, send the clip. Even a partial shot counts.

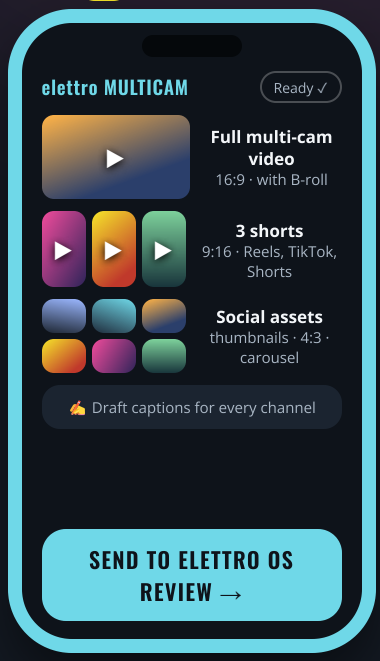

2 SESSION HOST

ONE TAP: MAKE IT

Only the host holds the QR. When the angles are in, one tap starts the edit — clips line up by sound automatically.

3 CONTENT DROP

REVIEW & POST

Lands in Elettro OS as drafts. Approve, and it flows to the calendar and your connected channels.

1. **START** — Host opens a session & shows the QR
2. **SHOOT** — Every phone rolls — fixed & roaming
3. **UPLOAD** — Band stops, scans, sends clips
4. **MAKE IT** — Auto-align, edit & add B-roll
5. **POST** — Approve in Elettro OS & publish

WHAT ONE TAP MAKES

- **Full multi-cam video** — cut on the music, best angle for every moment
- **B-roll built in** — from the Elettro OS stock gallery & your own folders
- **Vertical shorts** for Reels, TikTok & YouTube Shorts
- **Social assets** — thumbnails, stills & draft captions

WHY IT WORKS

- **No syncing, no gear.** Sound lines up every clip automatically
- **Partial shots count.** 20 seconds of a solo still makes the cut
- **Private by design.** Host-only QR that expires with the session
- **Fast first, 4K when you want it.** 1080p in minutes, 4K to follow
